

Andrew Kim

Software Developer | C#/.NET | Azure | Enterprise Integration

Burnaby, BC | 604-812-8504 | kbyunghak@gmail.com | linkedin.com/in/kbyunghak

PROFESSIONAL SUMMARY

Software Developer with 8+ years of experience developing and supporting enterprise applications in production environments. Strong background in C#, .NET, SQL Server, Azure services, REST APIs, and ERP/MES integration. Experienced in production troubleshooting, root cause analysis, cloud integration, operational automation, and AI-assisted development workflows, with a strong focus on software quality, reliability, and maintainability.

TECHNICAL SKILLS

- **Languages & Frameworks:** C#, SQL, JavaScript, .NET 8/Core, ASP.NET Web API, EF
 - **Cloud & Integration:** Azure Functions, Service Bus, Key Vault, Blob Storage, REST APIs, message-driven systems
 - **Data:** SQL Server, T-SQL, Azure SQL, ETL, data validation, reconciliation, query optimization
 - **Monitoring & Support:** Application Insights, Serilog, structured logging, production troubleshooting, root cause analysis
 - **Development Practices:** Git, Azure DevOps, code review, release support, deployment validation, debugging, technical documentation
 - **Enterprise Systems:** Oracle ERP, AVEVA MES, OT/IT integration, PLC and HMI environments
 - **AI-Assisted Development:** GitHub Copilot and OpenAI Codex for coding, debugging, refactoring, and technical analysis; CodeRabbit for automated code review and pull request feedback
-

PROFESSIONAL EXPERIENCE

FreightLogics Systems | Langley, BC

Software Developer, Contract | May 2025 – Aug 2025

- Designed and implemented message-driven workflows using C#, .NET, Azure Functions, and Azure Service Bus to process shipment data across distributed systems.
- Implemented retry policies, dead-letter queues, validation controls, and duplicate-message detection.
- Added structured logging and correlation IDs using Serilog and Application Insights.
- Investigated and resolved production failures, duplicate records, and integration issues.
- Leveraged GitHub Copilot, OpenAI Codex, and CodeRabbit to accelerate implementation, improve code quality, support debugging, and streamline code reviews.

Ballard Power Systems | Burnaby, BC

Software Development Engineer | Jul 2021 – Sep 2024

- Developed and maintained a real-time data-ingestion system processing approximately 50,000 manufacturing files per day.
- Built C#/.NET REST APIs integrating MES applications with Oracle ERP and enterprise systems.
- Automated data validation and reconciliation to identify missing, duplicated, and inconsistent records.
- Investigated production incidents through application logs, database records, and integration flows.
- Developed monitoring and diagnostic tools that reduced manual monitoring by more than 90%.
- Optimized SQL queries and data-processing logic for high-volume operational workloads.
- Collaborated with manufacturing, operations, infrastructure, ERP, and business teams to resolve production issues and deliver continuous improvements across enterprise systems.

Tero Consulting | Port Coquitlam, BC

Software Developer | Jun 2016 – Jun 2021

- Developed and supported enterprise applications using C#, .NET, SQL Server, and JavaScript.
 - Delivered application enhancements, bug fixes, reports, and user-requested features.
 - Worked directly with clients to gather requirements, investigate issues, and deliver technical solutions.
 - Supported integrations, testing, deployment validation, production troubleshooting, and documentation.
-

PROJECTS

Azure Shipment Processing Workflow

Technologies: C#, .NET, Azure Functions, Azure Service Bus, Application Insights, Serilog

- Developed asynchronous, message-driven workflows for processing shipment data across distributed services.
- Implemented retry policies, dead-letter processing, duplicate-message detection, validation controls, and structured logging with correlation IDs.
- Improved fault tolerance and accelerated production troubleshooting by making failures traceable across asynchronous workflows.

Manufacturing Data Ingestion and Monitoring System

Technologies: C#, .NET, Azure, SQL Server, Azure Blob Storage

- Designed and supported a production data-ingestion system processing approximately 50,000 manufacturing files per day.
- Implemented automated validation, transformation, and storage processes to identify missing, duplicated, invalid, and inconsistent data.
- Developed monitoring and diagnostic capabilities that improved operational visibility and reduced manual monitoring by more than 90%.

ERP Work Order Reconciliation Tool

Technologies: C#, .NET, SQL Server, Oracle ERP

- Developed an application to validate and reconcile work-order data between Oracle ERP and SQL Server-based manufacturing systems.
 - Implemented automated comparison logic to identify missing, duplicated, and inconsistent records across connected systems.
 - Improved data accuracy and reduced manual investigation by providing clear exception and diagnostic information.
-

EDUCATION & TRAINING

Bachelor's Degree, Information Security Engineering | 2024 – 2026

Academic Credit Bank System, Ministry of Education, South Korea

All academic requirements completed; degree conferral expected Jul 2026

Diploma, Computer Systems Technology, Co-op Program | 2014 – 2016

British Columbia Institute of Technology

Industrial Automation – PLC and HMI Training | Jan 2026 – Mar 2026

British Columbia Institute of Technology
